

Take Your Mission To Greater Heights With **ENTERPRISE**

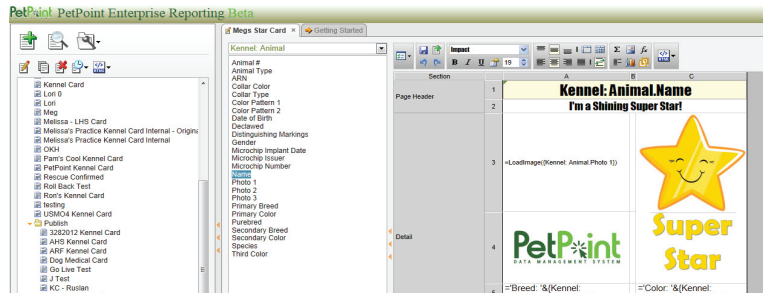

PetPoint Enterprise is designed to meet the needs of multi-level organizations with far-reaching and diverse animal welfare goals.

Built on the Release 4.0 platform, PetPoint Enterprise delivers new levels of IT efficiency, elastic scalability, and venture-class service through a host of new modules and upgrades to help high volume shelters bring new efficiencies to their operations, including enhanced scheduling, medical care, and tailored document building.

PETPOINT ENTERPRISE INCLUDES:

KENNEL CARD BUILDER

This module allows your organization to build and publish custom kennel cards. Equipped with a graphical interface that supports “drag-and-drop”, personnel can quickly create their dream custom cards to promote their animals.

REPORT BUILDER

Build your own set of custom reports and perform ad-hoc queries on real-time data with the Report Builder. This module provides the following:

- Wizard:** Created to allow even the “casual user” to easily design and execute reports, the New Report Wizard walks you through all the required steps to create a new report, from designing the layout to selecting filters and sort sequencers to selecting the desired output mode (e.g., Excel, HTML, PDF, RTF).
- Familiar Excel-Like Interface:** The Report Wizard produces fully formatted Excel workbooks (not just CSV files), allowing users to manipulate the format in an Excel-like grid and eliminating the “guess work” associated with placing data in the correct cells.
- Charting & Graphing:** Charting and graphing features facilitate the delivery of quality visual presentations with the click of a few buttons. Multiple charts and graphs can be combined in a single report giving users a comprehensive overview of important data.
- Automated Report Scheduler:** Designed to enhance efficiency of reporting, this module allows your organization to schedule reports to run using default configurations, at a predetermined date, without any manual intervention. It is a valuable feature for organizations running repetitive reports at set intervals using specific filters and output formats.

DOCUMENT BUILDER

The Document Builder gives your organization the ability to build its own Contracts, Receipts, Waivers, Vouchers and other forms within PetPoint, with the additional benefit of saving forms in a PDF format. Merge Data with PDF Templates: The system provides the ability to populate fill-in-the-blank PDF forms with data from PetPoint. For example, a W-9 can be populated with employee information from a Person record or a Rabies Certificate can be populated with Person & Animal Record details.

ADVANCED INTAKES/OUTCOMES

Intakes & Outcomes have a "status" field which allows your organization to schedule intake/outcome appointments and place animals on waiting lists for arrival or departure. This functionality streamlines the management of intakes and outcomes, and is ideal for organizations who handle intakes and outcomes "by appointment." In addition, Administrators can assign separate Security Roles per user for each intake/outcome type, including hiding those types not used by your organization or a specific user.

LOCATION MANAGEMENT

This module enables users to manage Sublocation statuses (In/Out of Service + Out of Service Reason); define capacity rules by housing type, animal type, gender and animal size; and track current occupancy. Enterprise clients can then find potential housing for an animal based on these rules when editing an animal's Site/Location/Sublocation. Additionally, the updated Location View Report includes new filters, data fields, and sorting functionality.

CARE ACTIVITY

The Care Activity module builds onto the Post-Mortem Activity module, expanding its use to any activity within the shelter that requires management. Track media and community events, grooming, training, play dates, and other activities your animals participate in with this fully customizable module. Enterprise clients will enjoy activity statuses in addition to standard multi-animal features like those in Intake/Outcome. This allows shelters to create as many activity types as necessary for managing the individual needs of each animal.

FOLLOW-UP

This module provides a central place from which your organization can manage scheduled and pending records in Intake, Outcome, Medical, Foster, Behavior, and Care Activity. Combined with the ability to update groups of animals all at once, updating of status information is easy and efficient.

The screenshot displays the 'Follow Up' module interface. At the top, there are navigation tabs for 'Medical', 'Foster', 'Intake', 'Outcome', 'Behavior', and 'Care Activity'. Below these are sub-tabs for 'Exam/Surgery', 'Tests', 'Vaccinations', and 'Treatments'. The main content area shows a table of vaccination records with columns for 'Vaccination Type', 'Animal ID', 'Site', 'Name', 'Species', 'Status', 'Provider', 'Status Date Time', 'Assistant', and 'Site'. Three records are visible, each with a checkbox and a 'Delete' link. Below the table, there are sections for 'Apply Selections', 'Status Details', and 'Mass Update Results'. The 'Status Details' section includes dropdown menus for 'Completed', 'Status Date Time', 'Provider', 'Assistant', and 'Site'. The 'Mass Update Results' section shows a list of successful and failed updates with their corresponding animal IDs and vaccination details.
